## Keystone's new Comco ProGlide flexo press delivers what you need most: everything.

Quick turns. Precise registration and repeatability. The flexibility to handle short or long runs. You need it all, and Keystone's new Comco ProGlide MSP flexo press delivers. It's the newest addition to Keystone's arsenal of state-of-the-art equipment that gives you the competitive edge you need to be quick-to-market and cost efficient. All while maintaining the exceptional quality your brand and customers demand.

The Comco ProGlide MSP flexo press is designed to increase speed and automate quality control for precise registration and outstanding color. Highlights include:

A gas drying system that enables the unit to reach speeds up to 750.

Servo Driver units that provide automatic registration for each individual color—placing each color precisely where it needs to be.

The Comco prints on the widest range of packaging substrates from 48 gauge film to 24 point board stock, all without ever changing hardware. That means we can move jobs more quickly than ever before.

Keystone specializes in soda, water and dairy labels roll to roll polypropylene.

A 22-inch web provides the flexibility to turn short and long runs quickly while maintaining a competitive edge on price.

8-color water based ink, UV adhesive

Find out how Keystone can put the Comco ProGlide MSP flexo press to work on your next project. Call your Keystone sales representative or request a quote online at [www.keystoneprint.com](http://www.keystoneprint.com).

*Left: Keystone's new Comco ProGlide MSP flexo press features Servo Driver units that provide automatic registration for each color.*

*Right: Labels scream off the press at a speed of up to 750 fpm.*

*"Short runs and quick turns are essential to our customers' survival. Their buyers simply won't carry inventory anymore. The new Comco flexo press caters to short runs with incredible speed and a narrow web. Its efficiency makes it competitive for long runs, too."*
